Part B: Domain Description

Describe your domain chosen for DV II

Australian agriculture and food production - covering crop output, livestock, yield efficiency, and farm economics across all states from the 1990s to 2026.

Describe the Why and Who aspects of your DV II

Who: The average adult Australian - not an expert, but someone affected by farming through food prices and trade. Comfortable with basic charts but unlikely to read government statistics independently.

Why: Decades of meaningful agricultural change (record harvests, droughts, yield improvements from precision agriculture, export growth) are buried in technical government reports. The visualisation makes these patterns accessible and insightful - for example, showing that farmers now produce double the wheat yield per hectare compared to the 1990s using less land.

Describe the “What” aspect of your DV II

Three public datasets:

- **ABS** - Value of Agricultural Commodities Produced, 2021-22: state-level farm-gate values by commodity.
- **ABARES** - Australian Crop Report, March 2026: area planted and production by crop, 1989-2026.
- **ABARES** - Agricultural Commodities Statistics, March 2026: wheat yields, terms of trade, gross production value, and export figures by category, 1994-2027.

Describe the “How” aspect of your DV II

Eleven charts across four sections, each using appropriate marks and channels:

- Choropleth map - colour luminance encodes farm value by state (ordered channel for area marks)
- Horizontal bar chart - position on common scale (most effective ordered channel) encodes commodity value; colour hue separates categories
- Normalised stacked bar - position + colour hue show production composition per state (part-to-whole task)
- Multi-line chart - position on common scale encodes area planted; colour hue distinguishes crops
- Heatmap - colour luminance encodes wheat production; reveals simultaneous drought years as pale bands across all states - a pattern no other idiom exposes
- Dumbbell chart - position on common scale compares yields across two decades; lower data-ink ratio than grouped bars
- Annotated line - text annotations contextualise drought dips, supporting authored narrative storytelling
- Bubble scatter - position (x = year, y = yield), size (area planted), colour hue (season type); filter buttons implement Shneiderman's overview-first mantra
- Stacked area (exports) - position + colour hue encode export categories over time; legend-click isolation supports focus+context exploration

Tooltips, filter buttons, and a navigation bar are also present in some charts where appropriate.

Part C: Sketch

A URL to a PDF document with an image of your sketch on your GitHub account.

Tip: Test your URL in incognito mode to ensure it is a working URL

<https://github.com/moriekhelzoevanno/FIT2179-DV2/blob/main/sketch/Sketch.pdf>

Paste a screenshot of your sketch for your DV II.

Note: Use the entire page here for the screenshot and ensure that it is clearly legible and visible
